#### **DETAILED ACTION**

### Claim Rejections - 35 USC § 103

- 1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
  - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 2. Claims 1-4 and 8-33 are rejected under 35 U.S.C. 103(a) as being unpatentable over *Applicant's Admitted Prior Art* in view of *Shalom et al.* (6,493,410) and further in view of *Tomasz* (6,400,416).

As per claims 1-4,15-16, and 27-30, *Applicant's Admitted Prior Art* disclosed a method of providing a frequency translation circuit comprising an input signal (fig. 1/item IN) interface accepting a video bandwidth signal at a first frequency, an output signal (fig. 1/item OUT) interface passing said video bandwidth signal at a desire frequency, a first mixer (fig. 1/no. 121) circuit having a first input and a first output, wherein a signal provided to said first input is provided to said first output at an increased frequency; and a second mixer (fig. 3/no. 214) circuit having a second input and a second output, wherein said second mixer is coupled to said first mixer, and wherein a signal provided to said second input is provided to said second output at a decreased frequency (see *Applicant's Admitted Prior Art*, pg. 8/ln. 10-pg. 9/ln. 210).

Application/Control Number: 09/552,760

Art Unit: 2685

Applicant's Admitted Prior Art does not specifically disclose that both the first and second mixers are single sideband mixers. However, such single sideband mixers are well known in the art, as disclosed by Shalom et al. (col. 2/ln. 10-15). Therefore, it would have been obvious to one of ordinary skill in the art to provide single sideband mixers, as disclosed in Shalom et al., in place of the first and second mixers of Applicant's Admitted Prior Art to provide either the sum or difference of the input frequencies and also provide a lower inherent noise output and remove unwanted image signal.

Furthermore, the modified system of *Applicant's Admitted Prior Art* do not disclosed that both mixers are disposed on a common IC substrate. However, such mixers disposed on a common IC substrate are well known in the art, as disclosed by *Tomasz* (fig. 2-5/no. 216). Therefore, it would have been obvious to one of ordinary skill in the art to have both mixers disposed on a single IC substrate, as disclosed in *Tomasz*, to the modified system of *Applicant's Admitted Prior Art* to save space & cost.

As per claims 8-10 and 23, the modified system *Applicant's Admitted Prior Art* and *Tomasz* disclosed a signal amplitude manipulator disposed on a common IC substrate (see *Applicant's Admitted Prior Art*, fig. 1/no. 114, see *Tomasz*, fig. 3/no. 252, 256).

As per claims 11-13 and 24-25, the modified system *Applicant's Admitted Prior*Art and *Tomasz* disclosed a filter, coupled to the first single sideband mixer, is disposed on a common IC substrate (see *Applicant's Admitted Prior Art*, fig. 1/no. 141, see *Tomasz*, fig. 4/no. 210).

Art Unit: 2685

As per claim 14, the modified system *Applicant's Admitted Prior Art* and *Tomasz* disclosed a filter, coupled to said first single sideband mixer, is disposed external of the common IC substrate (see *Tomasz*, fig. 3/no. 210).

As per claims 17-19, the modified system *Applicant's Admitted Prior Art* and *Tomasz* disclosed the first sideband mixer comprises a phase shifter to provide an inphase and quadrature signals (see *Marshall*, fig. 2/no. 54).

As per claim 20, the modified system *Applicant's Admitted Prior Art* and *Tomasz* disclosed an amplifier, coupled to said input, is disposed on a common IC substrate (see *Applicant's Admitted Prior Art*, fig. 1/no. 111, see *Tomasz*, fig. 3/no. 224).

As per claims 21-22, the modified system *Applicant's Admitted Prior Art* and *Tomasz* disclosed an amplifier, coupled to between said first and second mixers, is disposed on a common IC substrate (see *Applicant's Admitted Prior Art*, fig. 1/no. 111, see *Tomasz*, fig. 3/no. 224).

As per claim 26, the modified system *Applicant's Admitted Prior Art* and *Tomasz* disclosed said first mixer comprises a fixed frequency carrier and said second mixer comprises a variable frequency carrier (see *Applicant's Admitted Prior Art*, fig. 1/no. 131,132).

## Allowable Subject Matter

3. Claims 5-7 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Application/Control Number: 09/552,760

Art Unit: 2685

4. Claims 34-37 are allowed.

### Conclusion

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Scott (6,522,642), Liu (6,496,545), Na (6,112,069), Ashby (5,861,781), Koyama (5,706,311), Baskin et al. (5,528,196), Inokuchi (5,383,223), and Becker (EP0684697A1) disclose radiotelephone communication system.

6. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Pablo Tran whose telephone number is (703)308-7941. If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Edward Urban, can be reached at (703)305-4385.

### Any response to this action should be mailed to:

Commissioner of Patents and Trademarks

Washington, D.C. 20231

### or faxed to:

(703) 872-9314 (for Technology Center 2600 only)

Hand-delivered responses should be brought to Crystal Park II, 2121 Crystal Drive, Arlington, VA, Sixth Floor (Receptionist).

Art Unit: 2685

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the Technology Center 2600 Customer Service Office whose telephone number is (703) 306-0377.
